TRUGUARD® GUTTER PROTECTION

## Getting water down and out.

The roof directs water into the gutters. Without free-flowing gutters and downspouts, water can collect and create problems. TruGuard's patented nose-forward design means that only water can get in, keeping leaves, pine needles and debris out, assuring water flows freely from the roof to the ground.

- Aluminum panel with Kynar® paint system

- Keeps your gutters flowing to more effectively capture and contain rain water for reuse if you desire

- Attaches to the fascia—not to the roof—with patented fasteners, strengthening your existing gutters

Kynar® coated 0.024" aluminum provides the best finish and strength
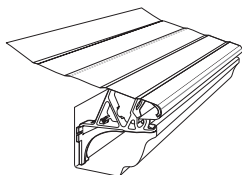

Patented nose-forward design

No roof penetration = less exposure to risk of leaks and roof repairs

Patented double duty bracket provides 10x the strength of any other bracket on the market:
- Reinforces and stabilizes the gutter
- Supports the panel
