

# TRUVALLEY® METAL VALLEY

Peak performance  
in the valley.

Debris gathers and remains in the valleys longer than any section of the roof. And bending shingles at an angle compromises the shingle material, reducing their lifespan. Utilizing metal valleys not only extends the life of your roof but properly channels water and debris away from your home.

- Carries water away from the shingles and down into the gutters smoother and quicker than woven, closed or open valleys.
- Metal W-Valley performs better and lasts longer than other options.
- Pre-formed metal product provides significant savings in installation time and labor.

Debris gathers and remains in valleys longer than any section of the roof.

Steel valleys not only extend the life of your roof but they also properly channel water and debris off your roof.

Most high-end asphalt shingles require a steel w-valley to be installed.
